

Business Requirements Document

AI Calling Solution with Direct Zoho CRM Integration

Offshore and Onshore Student Enquiry Workflows

Document Item	Details
Client	PFEC Global
Prepared for	AI calling solution vendor / implementation partner
Document type	Business Requirements Document (BRD)
Version	1.0
Date	17 April 2026
Status	Draft for vendor discussion
Integration model	Direct Zoho CRM integration only

This BRD defines a Zoho CRM-first AI calling solution for PFEC Global. The solution must trigger calls directly from Zoho CRM, use campaign and enquiry context to tailor conversations, and write back stage-based outcomes after every attempt.

1. Executive Summary

PFEC Global requires an AI calling solution that integrates directly with Zoho CRM and supports both Offshore and Onshore student enquiries. The solution must initiate real-time or scheduled follow-up calls, speak contextually based on campaign and enquiry metadata, and update Zoho CRM after every call attempt using the agreed CRM stage model.

The workflow must support appointment booking, interested-but-unbooked outcomes, and disqualification when a student is either not interested or remains unreachable after seven call attempts. Zoho CRM will act as the single source of truth for lead intake, stage progression, call history, follow-up actions, and downstream communication triggers such as email and WhatsApp confirmations or nudges.

2. Business Objective

- Reduce speed-to-lead by initiating AI outreach as soon as a lead becomes eligible in Zoho CRM.
- Increase appointment conversions through contextual conversations based on destination, event, course, branch, and enquiry type.
- Standardize lead progression in CRM using a clear stage model for unanswered attempts, interested leads, booked appointments, and disqualified leads.
- Enable Zoho CRM to trigger downstream communication workflows without depending on Zapier.
- Create an auditable operating model with attempt history, outcomes, summaries, and reporting directly against the CRM record.

3. Scope

3.1 In Scope

- Direct integration between Zoho CRM and the AI calling platform.
- Real-time calling for new leads and batch calling for retry or re-engagement workflows.
- Offshore workflows for India, Sri Lanka, and Bangladesh.
- Onshore workflows for international students already in Australia.
- Context-aware scripting using campaign names, UTM parameters, branch context, and enquiry type.
- Zoho CRM stage updates after every attempt, including Appointment Booked, In Contact Interested, and Disqualified.
- Email and WhatsApp workflow triggers from Zoho CRM based on AI call outcomes.

3.2 Out of Scope

- Zapier-based orchestration for lead intake, calling triggers, or outcome synchronization.
- Manual file-based lead processing as the primary operating model.
- Migration guidance beyond the visa categories and talking points approved in PFEC Global knowledge bases.

4. Target Operating Model

Step	Business Action	System Responsibility
1	Lead is created or updated in Zoho CRM	Zoho CRM stores source, campaign, UTM, branch, and enquiry context
2	AI call becomes eligible	Zoho CRM triggers a real-time or scheduled call event to the AI platform

Step	Business Action	System Responsibility
3	AI calls the student	AI reads the contextual fields and uses the relevant Offshore or Onshore script
4	Outcome is captured	AI writes the stage, call summary, attempt number, and follow-up details back to Zoho CRM
5	Next workflow runs	Zoho CRM triggers confirmations, nudges, tasks, and reporting based on the returned outcome

5. Lead Sources and Contextual Communication

The AI agent must use CRM and campaign metadata to tailor the conversation so that the call reflects the original enquiry. Context should be read from Zoho CRM fields and not inferred from generic scripts alone.

Context Source	Examples	Required AI Behavior
Campaign name	UK_July_Intake, SydneyExpo, AUS_CourseUpgrade_Melb	Use campaign naming patterns to infer journey, destination, event, or branch relevance
UTM parameters	utm_campaign, utm_content, utm_source	Use UTM values to personalize the opening statement and prioritize the correct script
Destination / course / event fields	Canada, Nursing, Webinar, Expo	Speak specifically about the destination, course, or event that triggered the enquiry
Branch context	Sydney CBD, Melbourne, Adelaide	For Onshore education flows, confirm whether the student wants to visit the linked branch or meet virtually
Enquiry type	Education, Migration	Select the correct conversation path and routing logic
Region type	Offshore, Onshore	Apply the correct time-window, language approach, and appointment handling flow

6. Use Case Summary

6.1 Offshore Workflows (India, Sri Lanka, Bangladesh)

The Offshore solution must support both real-time calling and batch calling. All leads from paid campaigns and website enquiries should be called contextually based on campaign name or UTM metadata. The AI should understand whether the lead relates to a destination, event, or course and communicate accordingly.

Use Case	Requirement
Real-time calling	Trigger the AI call as soon as a new Offshore lead is created and eligible in Zoho CRM
Batch calling	Retry unanswered leads according to the configured seven-attempt logic over five days
Destination-based context	Reference the destination of interest if the campaign or UTM suggests a destination intent
Event-based context	Reference the event name, event purpose, and attendance relevance for event registrations
Course-based context	Reference the course or study area and steer the student toward counseling or appointment booking

6.2 Onshore Workflows (Australia)

Onshore enquiries are split into two distinct journeys: Education-related enquiries and Migration-related enquiries. The AI must identify the correct path from the campaign context or a dedicated CRM field.

Onshore Enquiry Type	Requirement
Education / course upgrade	Confirm the student wants help with a course upgrade, pathway, or study change. Use the campaign-linked branch and ask whether the student prefers an in-person branch visit or a virtual meeting.
Migration / visa	Use the PFEC-approved migration knowledge base to identify supported visa categories and allowed talking points. Book the lead into the migration workflow only when the enquiry falls within supported scope.

For migration enquiries, the AI must rely on the vendor-approved integration with PFEC Global knowledge bases. The visa types and any permitted language should be treated as configurable content governed by PFEC, not hard-coded assumptions.

7. Zoho CRM Integration Requirements

The target architecture is direct integration with Zoho CRM only. The AI vendor must not rely on Zapier for lead handoff, call initiation, or stage synchronization in the production design.

7.1 Data Read from Zoho CRM

Field Group	Required Fields
Identity	Lead ID, name, phone number, email address
Source context	Lead source, campaign name, UTM source, UTM medium, UTM campaign, UTM content, UTM term

Field Group	Required Fields
Journey context	Destination, course, event name, region type, enquiry type, branch
Qualification context	Preferred intake, notes, counselor allocation, and any custom fields needed by PFEC

7.2 Data Written Back to Zoho CRM After Every Attempt

Category	Required Write-Back Data
Attempt tracking	Lead Stage, attempt number, attempt date and time, next follow-up date and time
Call outcome	Connected / not connected, short call summary, transcript summary, recording URL if available
Qualification	Appointment status, meeting mode, branch preference, In Contact Interested flag where relevant
Disqualification	Disqualified status and reason when the lead is not interested or unreachable after seven attempts

7.3 Downstream Workflow Trigger Requirement

Zoho CRM must be able to trigger post-call communication workflows based on the stage and outcome returned by the AI platform. Appointment Booked should trigger confirmation workflows. In Contact Interested should trigger nurture or booking-nudge workflows. Disqualified outcomes should stop further AI calling and close the lead according to CRM rules.

8. CRM Stage Model

The following Lead Stage values are required in Zoho CRM and should be used exactly as the primary workflow stages for the AI calling process.

Lead Stage	When It Is Used	Required System Behavior
Not Yet Contacted	Default stage for a new lead before any AI call attempt	Lead is eligible for the first real-time or scheduled call
1st Contact Attempted	First call attempt made and the student does not answer	Schedule the next attempt according to retry rules
2nd Contact Attempted	Second unanswered attempt	Continue retry logic
3rd Contact Attempted	Third unanswered attempt	Continue retry logic
4th Contact Attempted	Fourth unanswered attempt	Continue retry logic
5th Contact Attempted	Fifth unanswered attempt	Continue retry logic
6th Contact Attempted	Sixth unanswered attempt	Continue retry logic
7th Contact Attempted	Seventh unanswered attempt	If still no response, move to Disqualified with reason No Response After 7 Attempts
In Contact Interested	Student answers and shows interest but does not complete booking	Keep the lead active, allow follow-up, and trigger nudge workflows from Zoho CRM
Appointment Booked	Student answers and confirms an appointment	Store appointment details and stop the unanswered retry sequence
Disqualified	Student is not interested or remains unreachable after seven attempts	Stop further AI calling and store the disqualification reason in Zoho CRM

9. Business Rules

Rule ID	Business Rule
BR-01	Every new eligible lead must begin in the stage Not Yet Contacted.
BR-02	If the first call is not answered, update the lead to 1st Contact Attempted.
BR-03	Each additional unanswered attempt must move the lead sequentially through 2nd to 7th Contact Attempted.
BR-04	The retry model must support up to seven attempts over the next five days using configurable calling windows.
BR-05	If the lead answers and is interested but does not book, update the lead to In Contact Interested.

Rule ID	Business Rule
BR-06	If the lead books during the AI interaction, update the lead to Appointment Booked and write the appointment details back to Zoho CRM.
BR-07	If the lead explicitly declines interest, update the lead to Disqualified with reason Not Interested.
BR-08	If the lead remains unanswered after the 7th Contact Attempted stage, update the lead to Disqualified with reason No Response After 7 Attempts.
BR-09	No further AI retry attempts should occur once the lead reaches Appointment Booked or Disqualified.
BR-10	Zoho CRM must own the downstream email, WhatsApp, task, and reporting logic after the AI writes back the outcome.

10. Functional Requirements

FR ID	Requirement
FR-01	The AI solution must support direct Zoho CRM integration only.
FR-02	The AI solution must read all required lead, campaign, UTM, and enquiry context from Zoho CRM.
FR-03	The AI solution must support real-time call triggering for eligible new leads.
FR-04	The AI solution must support scheduled or batch calling for retries and re-engagement.
FR-05	The AI solution must adapt its script based on destination, course, event, branch, enquiry type, and region.
FR-06	For Onshore education leads, the AI must confirm whether the student prefers a branch visit or a virtual meeting.
FR-07	For Onshore migration leads, the AI must use the PFEC-approved knowledge base to determine supported visa enquiry scope.
FR-08	After every attempt, the AI solution must write the updated stage and related attempt details back to Zoho CRM.
FR-09	The AI solution must write Appointment Booked, In Contact Interested, and Disqualified outcomes directly to Zoho CRM.

FR ID	Requirement
FR-10	The AI solution must stop unanswered retry logic once the lead is booked or disqualified.
FR-11	The AI solution must support Zoho CRM workflows for appointment confirmations and nudge messaging.
FR-12	The AI solution must provide sufficient data for reporting, audit, and operational follow-up.

11. Non-Functional Requirements

NFR ID	Requirement
NFR-01	The integration must be secure and compatible with PFEC Global-approved Zoho CRM access methods.
NFR-02	Call write-back events must be reliable, traceable, and time-stamped.
NFR-03	Real-time lead processing should minimize delay between CRM lead creation and first call attempt.
NFR-04	Retry schedules, stage mappings, and script logic must be configurable without redesigning the CRM model.
NFR-05	The solution must scale across multiple campaigns, branches, and enquiry types.

12. Reporting Requirements

- Lead volume by source, campaign, region, destination, course, event, and branch.
- Distribution of leads by Lead Stage, including In Contact Interested, Appointment Booked, and Disqualified.
- Attempt-wise answer rate and conversion rate from initial call through later retries.
- Appointment booking rate by campaign, branch, and enquiry type.
- Disqualification counts by reason, at minimum Not Interested and No Response After 7 Attempts.
- Operational visibility into pending follow-ups, upcoming appointments, and overdue retries.

13. Assumptions and Dependencies

- Zoho CRM is available as the primary source of lead intake, orchestration, and workflow triggering.
- PFEC Global will provide the final CRM field mapping, campaign naming conventions, and any branch master data required for context detection.
- Migration-related knowledge base content will be supplied and approved by PFEC Global before production deployment.
- Appointment scheduling rules, calendars, and branch availability logic will be available to the AI platform or associated scheduling component.

14. Acceptance Criteria

AC ID	Acceptance Criterion
AC-01	A new eligible lead in Zoho CRM can trigger the AI calling workflow directly without Zapier.
AC-02	The AI can correctly read campaign and enquiry context from Zoho CRM and use it in the conversation.
AC-03	Unanswered leads progress through Not Yet Contacted to 1st through 7th Contact Attempted in the correct order.
AC-04	Interested but unbooked leads are set to In Contact Interested and remain available for follow-up.
AC-05	Booked leads are set to Appointment Booked with the relevant appointment details written back to Zoho CRM.
AC-06	Leads that are not interested or unreachable after seven attempts are set to Disqualified with the appropriate reason.
AC-07	Zoho CRM can trigger follow-up communications and reporting based on the returned stage and outcome.

15. Vendor Response Checklist

- Confirm the direct Zoho CRM integration method proposed for production use.
- Confirm how campaign names, UTM parameters, branch context, and enquiry type will be mapped into AI variables.
- Confirm how the vendor will write back every attempt, stage transition, and appointment outcome to Zoho CRM.
- Confirm how the seven-attempt retry model will be configured and monitored.
- Confirm how migration knowledge base content will be referenced or synchronized for supported visa enquiries.
- Confirm any dependencies, constraints, or implementation assumptions that PFEC Global must plan for.

Required Zoho CRM Lead Stage values: Not Yet Contacted, 1st Contact Attempted, 2nd Contact Attempted, 3rd Contact Attempted, 4th Contact Attempted, 5th Contact Attempted, 6th Contact Attempted, 7th Contact Attempted, In Contact Interested, Appointment Booked, and Disqualified.
